

Project Idea:

A commercial website for an event planning company.

Background:

My sister has a small business that organizes birthdays, engagements, dinner parties and events. I want to help her by making a website that can later be updated to her preferences so she can use it commercially.

Note to teacher: I think I mentioned in class it was a clothing shop, I'm sorry I didn't have all the details at the time.

Design:

I will be basing the artistic design and theme based on her Instagram Page.

There will be 1 CSS style sheet that designs the main page and the header and footer in every other page, The navigation panel will be integrated to the header for easier customer use and access. All other custom headers and pages will have their style integrated (this is easier for me. Kermel ma di3)

Note: The JavaScript will be integrated the same way.

Pages:

- 1.Home: Welcome Page.
- 2.About Us: Background and history about company and owner.
- 3.Contact Us: Contact information.
- 4.Services: Event Planner information + Event type/Services list.
- 5.ShowRoom: Custom event information + previous projects showcase + client feed back.

>>>In Services (in header) create links to:

- 5.(FormA)BookEvent:
 - I. Dinner Parties, Reunions(Casual)
 - II. Engagements, Gatherings, Meetings(Formal)
 - III. Birthday Parties, Children Parties(Celebration)
- 6.Events reservation/booking(links in 5):date and time:
